                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chromosome 21. Sequencing of 5 different sizes of cDNA clone (see AAZ34570-74) suggests that at least 3 isoforms exist. The invention CP provides methods for the disquests and treatment of megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, acute CP claukaemia, neural disorders, thromobocytopenia, platelet disorder on CP chromosome 21 with leukaemias, neural abnormalities, dysfunctions and CP chromosome 21 with leukaemias, neural abnormalities, dysfunctions and CP chromosome 21 with leukaemias, neural abnormalities, dysfunctions and CP chromosome 21 with leukaemias, neural abnormalities, dysfunctions and CP chromosome 21 with leukaemias, neural abnormalities, dysfunctions and CP chromosome 21 with leukaemias, neural abnormalities, dysfunctions and CP chromosome 21 with leukaemias, neural abnormality methods are CP chromosome 21 with leukaemias, neural abnormality myeloproliferative disorder, haematopoietic CP chromosome 21 with leukaemia; and treatment of a subject CP chromosome 22 with leukaemia; and treatment of a subject CP chromosome 23 with leukaemia; and treatment of a subject CP chromosome 24 with leukaemia; and treatment of a subject CP chromosome 25 with leukaemia; and treatment of a subject CP chromosome 26 prematal subject) having megakaryocytic abnormality, myeloproliferative disorder, leukaemia or neural CP chromosome 25 platelet disorder, platelet disorder, leukaemia or neural cP chromosome 26 platelet disorder, leukaemia or neural cP chromosome 27 platelet disorder, leukaemia or neural cP chromosome 28 platelet disorder, leukaemia or neural cP chromosome 29 platelet disorder, leukaemia or neural cP chromosome 20 platelet disorder, leukaemia or neural cP chromosome 21 with myeloproliferative disorder or leukaemia or neural cP chromosome 21 with myeloproliferative disorder or leukaemia or neural cP chromosome 21 with myeloproliferative disorder or leukaemia or neural cP chromosome 21 with myeloproliferative disorder or leukaemia or neural cP chromosome 21 with myeloprolifera
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

830 Primers useful for synthesizing WPI; 2001-524255/58. genetic manipulation. full length cDNA clones and their use

Example 11; SEQ ID NO 1639; 1380pp + Sequence Listing; English

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence was used as the representative sequence from a human clone which was used in homology searches to identify the clone. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from

                                                                                                                                                                                                                                                The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA length clones were obtained by construction of full length enriched cDNA is the construction of the protein encoded by the cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  EP1130094-A2
                                                                                                                                                  Sequence 877
                                                                                                                                                                                                  libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is the nucleotide sequence of the 5'-end of a cDNA provided in the invention. Note: The sequence data for this patent
                                                                                                                                                                                                                                                                                                                                                                   in genetic manipulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (HEL1-)

The invention relates to primers for synthesising full length cDNA clones, 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers

830 Primers useful for synthesizing in genetic manipulation full length cDNA clones and their use

SEQ ID 2646; 1380pp + Sequence Listing; English.

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly

                                                                                        밁
                                                                                                                                                                                                                                                                                                CC of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end CC sequence and an oligonucleotide comprising a sequence complementary to a CC polynucleotide which comprises a 3'-end sequence, where the CC chigonucleotide comprises at least 15 nucleotides and the combination of CC the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in CC gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length CDNAs and Specialised methods. AAH33165 to AAH13628 and CC cDNAs easily without any specialised methods. AAH30316 to AAH13628 and CC coligonucleotides, all of which are used in the exemplification of the CC coligonucleotides, all of which are used in the exemplification of the

The invention relates to human polynucleotides (AAI63803-AAI64012) and CC the encoded proteins (AAM43497-AAM4366) useful for preventing, treating CC or ameliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the CC specification. The nucleic acids, proteins, antibodies and (ant)agonists CC are useful in the diagnosis, treatment and prevention of: (a) cancer, CC e.g. breast and ovarian cancer and other cancers of the adrenal gland, CC bone, bone marrow, breast, gastrointestinal tract, liver, lung, or CC urogenital, (b) immune disorders e.g. Addison's disease, allergies, CC autoimmune haemolytic anaemia, autoimmune thyroiditis, diabettes mellitus, CC crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative CC colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and CC epilepsy; and (f) infectious diseases such as viral, bacterial, fungal cc and parasitic infections. Note: The sequence data for this patent did not

CC corresponding to a novel human SH3 gene, termed the SH3DIA gene, that CC corresponding to a novel human SH3 gene, termed the SH3DIA gene, that CC leukaemias, both in general and in particular those involving the CC megakaryocytic lineage. The SH3DIA gene maps to the small candidate CC region for low platelets on chromosome 21. Sequencing of 5 different CC sizes of cDNA clone from foetal brain (see AAZ34570-74) suggests that at CC least 3 isoforms exist. The invention provides methods for the diagnosis CC and treatment of megakaryocytic abnormality, myeloproliferative disorder, CC platelet disorder, acute leukaemia, neural disorders, thromobocytopenia, CC platelet disorder, acute help and disorders including brain malformations and colpocephaly. Methods are also provided for: suppressing cells unable to regulate themselves, screening for a somatic alteration in the SH3DIA CC gene, monitoring the progress and adequacy of a treatment, monitoring the progress or megakaryoctyic abnormality, myeloproliferative disorder, leukaemia, hematopoietic disorder, platelet disorder, leukaemia; and cc disorder, leukaemia or neural disorder platelet disorder, platelet 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acid from the human SH3D1A gene and its products, useful for the diagnosis and treatment of myeloproliferative disorders and leukemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  is the nucleotide sequence of full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Fig 10; 99pp;

CC corresponding to a novel human SH3 gene, termed the SH3D1A gene, that CC corresponding to a novel human SH3 gene, termed the SH3D1A gene, that CC contributes to the development of platelets and the pathogenesis of CC leukaemias, both in general and in particular those involving the CC megakaryocytic lineage. The SH3D1A gene maps to the small candidate CC region for low platelets on chromosome 21. Sequencing of 5 different CC sizes of cDNA clone from foetal brain (see ARZ34570-74) suggests that at CC least 3 isoforms exist. The invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, myelopyoliferative disorder, CC platelet disorder on chromosome 21, low platelets in deletion for 21, cassociation of gains in chromosome 21 with leukaemias, neural CC abnormalities, dysfunctions and disorders including brain malformations and colpocephaly. Methods are also provided for: suppressing cells unable to regulate themselves; screening for a somatic alteration in the SH3DIA CC gene; monitoring the progress of megakaryoctyic abnormality, myeloproliferative disorder, haematopoietic disorder, platelet disorder, heematopoietic disorder, platelet subject) having megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, leukaemia; and creatment of a subject (including a prenatal subject) having cc disorder, leukaemia or neural disorder using a nucleic acid that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8

(I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              diagnostics, for responsible for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ftp.wipo.int/pub/published_pct_sequences

```
CC complementary strand of a polynucleotide which comprises one of the 5602 CC nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary strand of a polynucleotide which comprises a 5'-end complementary to a polynucleotide comprises a 3'-end sequence complementary to a polynucleotide comprises a 3'-end sequence, where the complementary to a coligonucleotide comprises a 1'-end sequence, where the comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in comparison of the 5'-end sequence is selected from those defined in the specification. The primers are useful for synthesising polynucleotides, comparison and in the specification and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC cDNAs and AAH18742 represent human cDNA sequences; AAB92446 to AAH95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent the constant in the exemplification of the constant in the constant is the constant of the constant in the constant is the constant of the constant in the constant of the constant is constant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          27-AUG-1999;

The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded by (I), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative
                                                                                                               P-PSDB;
                                                                                                                                                                                                                                                                                                                17-

                                                                                                                                                                                                                                                                                                                                    Š
                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      abnormalities, dysfunctions and disorders including brain malformations and corresponding cognitive dysfunctions, microcephaly, lissencephaly, and colpocaphaly, Methods are also provided for: suppressing cells unable to regulate themselves; screening for a somatic alteration in the SH3DIA gene; monitoring the progress and adequacy of a treatment, monitoring tumour risk progress or megakaryoctyic abnormality, myeloproliferative disorder, haematopoietic disorder, platelet disorder or leukaemia; and treatment of a subject (including a prenatal subject) having megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, betweenia or neural disorder using a nucleic acid that expresses SH3DIA or its antisense nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is the nucleotide sequence of a cDNA clone, termed clone 5, corresponding to a movel human SH3 gene, termed the SH3D1A gene, that contributes to the development of platelets and the pathogenesis of leukaemias, both in general and in particular those involving the megakaryocytic lineage. The SH3D1A gene maps to the small candidate region for low platelets on chromosome 21. Sequencing of 5 different sizes of cDNA clone from foetal brain (see AAZ34570-74) suggests that at least 3 isoforms exist. The invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, acute leukaemia, neural disorders, thromosome 21, low platelets in deletion for 21, association of gains in chromosome 21 with leukaemias, neural abnormalities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acid from the human SH\betaD1A gene and its products, useful for diagnosis and treatment of myeloproliferative disorders and leukemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   뮹
cc with Esp15 protein), vesicular trafficking and actin cytoskeleton.

C Generally (1) (or its (ant)agonists, mimerics, fragments and inactive mutants); (1) specific antibodonists, by; sequences antisense to the (I) polynucleotide; agents that downregulate expression of Ese genes or associated with undesirable endocytosis and resulting changes in cellular function. Particularly overexpression of Ese1 is used to blook clathrin-mediated endocytosis in vivo or in cell cultures, while administration of (I) is used to promote endocytosis of selected cells. (Ant)agonists of (I) or Ab are used to suppress abnormal proliferation of cells that can be stimulated to proliferate by a growth factor receptor; and similar compounds (also inactive Ese mutants) can be used to prevent viral infection. Endocytosis may also be regulated, in vivo or in cell cultures, by forming an Ese-Esp15 complex, then binding dynamin to the complex. Generally conditions that can be treated include cancer; abnormal cell division or migration; viral infection; or abnormal

The present invention specifically describes mammalian Esel and 2 CC proteins (I) and their splice variants (Ese = EH-domain and SH3-domain CC regulator of endocytosis). (I) are involved in regulation of clathrin-CC mediated endocytosis (as a complex with Espl5 protein), vesicular CC trafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists, CC mimetics, fragments and inactive mutants); (I)-specific antibodies (Ab); CC sequences antisense to the (I) polymucleotide; agents that downregulate CC expression of Ese genes or antagonists of an Ese binding partner are used to treat diseases associated with undesirable endocytosis and resulting CC changes in cellular function. Particularly overexpression of Esel is used CC to block clathrin-mediated endocytosis in vivo or in cell cultures, while CC (Ant)agonists of (I) is used to promote endocytosis of selected cells. CC (Ant)agonists of (I) or Ab are used to suppress abnormal proliferation of CC cells that can be stimulated to proliferate by a growth factor receptor; and similar compounds (also inactive Ese mutants) can be used to prevent cultures, by forming an Ese-Espl5 complex, then binding dynamin to the CC complex. Generally conditions that can be treated include cancer; CC abnormal cell division or migration; viral infection; or abnormal correspondence represents mouse Facil. CNM semience
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid encoding Esel and 2 proteins, involved in regulation of endocytosis, used e.g. for treating cancer or preventing viral infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2000-052802/04
